European Journal of Engineering Education

Description: Published quarterly, it examines the economic, cultural, and social factors which influence the education of engineers in different societies and provides a forum in which teachers in engineering schools, institutions and industry can share accounts of good practice and discuss methodology. Technological change constantly creates new demands on both engineers and the educational system that produces them. This journal contributes to the development and improvement of engineering education necessary to meet those demands. Each issue, with its specially appointed Guest Editor, concentrates on a theme which is of general value to everyone involved in engineering education and which also has particular applications within the different engineering disciplines. European Journal of Engineering Education is free to SEFI members.

Publisher: Taylor & Francis on behalf of the European Society for Engineering Education
