POKET - An out of the box tool for researchers to deploy their own crowdsourcing engagements

The focus is on projects that can benefit from self-reported data, high-frequency data capture, citizen-generated data, participatory mapping or community-driven insights. POKET retrofits their suite of mobile and desktop tools so researchers can generate location-specific insights in a community, while rewarding them back in the process. The solution largely focuses on the Global South (ex. Africa, South [East] Asia, South America, LATAM, etc.) and is optimized for low-cost Android devices.

LASER PULSE East Africa Award Undertakes Co-design Approach Toward Partnership

In the Exploring Blockchain Technology to Improve Food Security Through African Indigenous Vegetables project in Western Kenya, we have prioritized a co-design process between the research and research translation partners from the proposal development stage.

Stakeholder Analysis

A key component of LASER PULSE's Embedded Research Translation model is the collaboration of researchers and practitioners in development research projects. Involving stakeholders in all phases of a research project results in translated products that are custom designed for the development challenge and to the needs of the users of the product(s). By ensuring stakeholder involvement and buy-in from the start of the project, the translated products are more likely to be adopted and applied by these key actors, enabling greater uptake and broader impact than researchers and the practitioners on the research team would be able to achieve on their own.

Uganda Project Catalyzing Change in Social Emotional Learning Through Remote Train-the-Trainer Model

A new LASER PULSE project to develop and test an early childhood evidence-based intervention for social emotional learning in Uganda has begun to implement a train-the-trainer scale-up model.

Developing Locally Relevant Measures of Commitment

A recently-concluded LASER PULSE project, funded by USAID, can offer you insights into measuring local level capacity and commitment. Collaborators from Texas A&M, Notre Dame, USAID and a Ugandan NGO worked through the Just Like My Child training program to achieve results.
